

A balanced approach to quality for construction management.

Has the lack of equipment documentation stopped your facility's staff from achieving peak performance? 90% of the teams using the OnQ system receive operation and maintenance manuals on the date of substantial completion.

With the innovative OnQ system, you'll reduce costs, improve quality, and do both on time for every project. Our comprehensive O&M Manager integrates technology with a quality assurance mindset. The result: complete and accurate information about your facility's as-built equipment and systems that's easy to access by all who need it when they need it.

OnQ compiles all the technical manuals, drawings, and other documentation for your equipment and building systems and delivers:

- Easily searchable electronic files
- Facility-specific data reflecting as-built characteristics
- Timely information in the hands of those who need it
- Electronic files for use in the field on tablet PCs or PDAs
- Reduced training time and costs through easier access to documentation
- Faster repair and maintenance response times
- Greatly improved documentation of government-mandated quality data
- Vastly reduced paperwork

OnQ encourages a team approach to quality throughout the construction process. O&M Manager collects and streamlines data, improving communication among team members and ensuring that information is available from the first day throughout the facility's life. Imagine the benefits of that kind of coordination and accountability – not to mention better profitability and on-time performance.

Consider OnQ your quality improvement and rework reduction system. You'll rest easy when your work is done right the first time, every time. Call us today at (920) 967-0032.

BENEFITS

- Dramatically more efficient building troubleshooting
- Reduced operation and maintenance training time
- Closing out projects on time
- Efficient document management
